Department of Computer Science and Engineering
CO1 ASSESSMENT TOOL 2 – Agile Sprint Planning & User Story Workshop

Course Code:	CSA10 / CSA1063	Course Title:	Software Engineering
CO Assessed:	CO1	Assessment:	Assessment Tool 2 – Agile Sprint Planning & User Story Workshop
Weightage:	20%	Total Marks:	25
CO1 Statement:	<i>Apply advanced methodologies and agile project management techniques to manage software projects effectively</i>		
Student Name:	K.Bhavana	Reg. No.:	192524178
Date:	27/07/26	Duration:	60 minutes

Code of Conduct

I K.Bhavana(192524178) (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: K.Bhavana

Annexure A – Agile Sprint Planning & User Story Workshop

Instructions to Students:

Each student is assigned an individual software project problem statement. Based on the given problem statement, perform an **Agile Sprint Planning and User Story Workshop** by applying Agile software engineering practices. Prepare a comprehensive sprint planning document covering the following aspects:

Based on the given problem statement, perform an **Agile Sprint Planning and User Story Workshop** by applying Agile software engineering practices. Prepare a comprehensive sprint planning document covering the following aspects:

- 1. Identify the Project Vision and Stakeholders**
 - Define the project's vision, objectives, and identify all key stakeholders involved.
- 2. Create Epics and User Stories**
 - Break down the requirements into Epics and formulate well-structured User Stories using the format:
As a <user>, I want <feature>, so that <benefit>.
- 3. Define Acceptance Criteria**
 - Write clear and measurable acceptance criteria for each selected user story using the Given–When–Then format or equivalent.
- 4. Prioritize the Product Backlog**
 - Organize and prioritize the product backlog based on business value, customer needs, and project dependencies.
- 5. Plan the Sprint Backlog**
 - Select high-priority user stories for the first sprint and divide them into actionable development tasks.
- 6. Estimate Effort Using Story Points**
 - Assign story points to each selected user story using an appropriate estimation technique (e.g., Fibonacci sequence or Planning Poker) and justify your estimates.
- 7. Present the Sprint Goal and Expected Deliverables**
 - Define a clear sprint goal and describe the expected sprint deliverables, including the features to be

completed at the end of the sprint.

1. Project Vision and Stakeholders

1.1 Problem Statement

Women-owned small businesses face difficulty accessing government schemes, financial assistance, and mentoring because information is fragmented across multiple, disconnected websites. There is a need for a single, integrated digital platform that consolidates registration, funding opportunities, training programs, and networking support for women entrepreneurs, in alignment with UN Sustainable Development Goal 5 (Gender Equality).

1.2 Project Vision

To build a unified, accessible, and secure Women Entrepreneurship Support Portal that empowers women entrepreneurs across the country to discover and access government schemes, financial assistance, skill-development training, and mentorship/networking opportunities through a single digital gateway — reducing information fragmentation, cutting down application turnaround time, and increasing the number of women-led businesses that successfully scale.

1.3 Project Objectives

- Provide a single point of access to government schemes, subsidies, and loan programs for women entrepreneurs.
- Simplify registration and eligibility verification for financial assistance.
- Offer curated training and skill-development programs with enrollment and certification tracking.
- Enable networking and mentorship between entrepreneurs, mentors, and peer communities.
- Give the government agency real-time visibility into scheme uptake and program impact through reporting dashboards.

1.4 Key Stakeholders

Stakeholder	Role / Interest
Women Entrepreneurs (Primary Users)	Register, discover schemes, apply for funding, enroll in training, seek mentorship.
Government Agency (Product Owner / Sponsor)	Owns the platform, defines policy, funds development, monitors SDG-5 impact metrics.
Financial Institutions / Banks / NBFCs	Provide loan/subsidy schemes, evaluate and disburse funding applications.
Training Providers / Skill Development Bodies	Design and deliver training/skill-building programs listed on the portal.
Business Mentors / Industry Experts	Offer one-on-one or group mentorship and networking support.

Stakeholder	Role / Interest
NGOs & Women Self-Help Groups (SHGs)	Facilitate outreach, grassroots onboarding, and community networking.
Portal Administrators	Manage content, approve applications, monitor platform health and reports.
Development & QA Team	Design, build, test, and maintain the platform (Scrum Team).
Scrum Master / Project Manager	Facilitates Agile ceremonies, removes impediments, tracks sprint progress.

2. Epics and User Stories

EPIC 1: User Registration & Profile Management

Allow women entrepreneurs to securely register, verify their identity, and manage their business profile.

ID	User Story
US1.1	As a woman entrepreneur, I want to register on the portal with my personal and business details, so that I can access personalized schemes and services.
US1.2	As a woman entrepreneur, I want to verify my identity using government-issued ID and business documents, so that my profile is authenticated for scheme eligibility.
US1.3	As a registered user, I want to edit and update my business profile, so that my information stays current and accurate.
US1.4	As a user, I want to reset my forgotten password via OTP verification, so that I can regain access to my account securely.

EPIC 2: Funding & Government Scheme Discovery

Enable entrepreneurs to search, check eligibility for, and apply to government funding schemes in one place.

ID	User Story
US2.1	As a woman entrepreneur, I want to search and filter government schemes by category (loan, subsidy, grant), so that I can find funding relevant to my business.
US2.2	As a woman entrepreneur, I want to check my eligibility for a scheme through a short guided questionnaire, so that I don't waste time applying for schemes I don't qualify for.
US2.3	As a woman entrepreneur, I want to apply for a scheme directly through the portal with document upload, so that I don't need to visit multiple government offices or websites.
US2.4	As a woman entrepreneur, I want to track the real-time status of my funding application, so that I know its progress and next steps.

EPIC 3: Training & Skill Development Programs

Help entrepreneurs discover, enroll in, and complete relevant business skill-building programs.

ID	User Story
US3.1	As a woman entrepreneur, I want to browse available training programs by category and skill level, so that I can find courses relevant to my business needs.
US3.2	As a woman entrepreneur, I want to enroll in a training program online, so that I can attend and improve my business capabilities.

ID	User Story
US3.3	As a trainee, I want to receive a digital certificate on course completion, so that I can showcase my qualification to lenders and customers.

EPIC 4: Networking & Mentorship

Connect entrepreneurs with mentors and peer communities to support business growth.

ID	User Story
US4.1	As a woman entrepreneur, I want to request and connect with a business mentor in my industry, so that I can get guidance for my venture.
US4.2	As a woman entrepreneur, I want to join industry-specific networking groups, so that I can collaborate with and learn from peers.
US4.3	As a mentor, I want to view mentee profiles and mentorship requests, so that I can offer relevant, targeted guidance.

EPIC 5: Admin & Content Management

Give the government agency the tools to manage content, approvals, and reporting.

ID	User Story
US5.1	As an admin, I want to add, update, and remove scheme and training listings, so that portal content remains accurate and current.
US5.2	As an admin, I want to review and approve/reject scheme applications, so that only eligible entrepreneurs receive funding.
US5.3	As an admin, I want to generate reports on portal usage and scheme uptake, so that the agency can measure the program's impact against SDG-5 targets.

EPIC 6: Notifications & Communication

Keep entrepreneurs informed proactively about opportunities and deadlines.

ID	User Story
US6.1	As a woman entrepreneur, I want to receive notifications about new schemes matching my profile, so that I don't miss relevant funding opportunities.
US6.2	As a woman entrepreneur, I want to receive reminders about application and enrollment deadlines, so that I can submit on time.

3. Acceptance Criteria

Acceptance criteria for the eight highest-priority user stories are defined below using the Given–When–Then format, ensuring each is specific, testable, and traceable to its parent user story.

US1.1 — Register with business details

This user story focuses on allowing a woman entrepreneur to create an account on the portal by entering her personal and business details. Registration is the first step in the system because users cannot access personalized services without an account. The portal should collect basic details such as name, mobile number, email address, and business category. It should also validate the entered information and prevent duplicate accounts using the same mobile number or email. This story is important because it creates the foundation for all other features, including verification, scheme search, training enrollment, and mentorship. In Jira, this task is moved to In Progress to show that Sprint 1 development has started.

US1.2 — Identity / Document Verification

This user story focuses on verifying the identity and business authenticity of a registered woman entrepreneur. After registration, the user must upload required documents such as a government-issued ID and business proof. This step is necessary because many government schemes, subsidies, loan programs, and training benefits are meant only for eligible and verified users. The portal should allow users to upload documents safely and should check whether the uploaded files are valid, readable, and in the correct format. Once submitted, the profile status should change to Verification Pending and the documents should be available for admin review. If the admin approves the documents, the user profile becomes Verified. If the documents are blurred, invalid, or unsupported, the system should show an error message and ask the user to upload correct files. This story is important because it builds trust in the platform and prevents misuse of government benefits. It also connects directly to scheme eligibility and funding application features. In Jira, this story belongs to Sprint 1 because verification is required before users can access personalized scheme recommendations. The story point estimate is 5 because it includes document upload, validation, backend processing, and admin review.

US2.1 —Edit Business Profile

This user story allows a registered entrepreneur to edit and update her business profile after registration. Business details may change over time, such as business address, category, contact information, turnover, business stage, or ownership details. The portal should provide a simple profile editing screen where the user can update information whenever required. When valid data is entered, the system should save the changes successfully. If invalid or incomplete data is entered, the system should show an error message and prevent incorrect updates. This story is useful because accurate profile data helps the portal recommend relevant government schemes, funding opportunities, training programs, and mentorship options. If the profile is outdated, the user may receive wrong scheme suggestions or may fail eligibility checks. This feature also improves user control because entrepreneurs can maintain their own information without depending on admin support for every small change. In Jira, this story is included in Sprint 1 because it supports the complete onboarding and profile management flow. It comes after registration and verification

because the user first needs an account before editing profile information. The story point estimate is 2 because it is relatively simple compared to document verification or eligibility checking. It mainly involves a reusable form, validation, and update functionality.

US2.2 — Password Reset via OTP

This user story provides a secure password reset feature for users who forget their login password. Since the portal contains personal, business, and financial-related information, account recovery must be safe and reliable. The system should allow the user to request a password reset using her registered mobile number or email address. An OTP should be generated and sent to the user. If the user enters the correct OTP, the system should allow her to create a new password. If the OTP is incorrect or expired, the system should show an error message and block the reset process. This feature is important because users may lose access to their accounts, and without password recovery they cannot use portal services such as scheme search, eligibility checking, applications, training, or mentorship. OTP-based password reset improves both convenience and security. In Jira, this story is part of Sprint 1 because account access is a basic requirement for all users. It supports the registration and login flow and helps maintain user trust. The story point estimate is 3 because it involves OTP generation, email or SMS integration, validation, and a password reset screen. It has moderate complexity due to the external communication dependency.

US2.3 — Search and Filter Schemes

This user story focuses on helping women entrepreneurs find suitable government schemes in one place. The main problem in the case study is that information about government schemes, subsidies, loans, and grants is scattered across multiple websites. Because of this, entrepreneurs may waste time searching different sources and may miss useful opportunities. This feature solves that problem by providing a centralized scheme catalogue with search and filter options. The user should be able to search schemes by keywords and filter them by category, state, business stage, loan type, subsidy type, or grant type. When filters are applied, only matching active schemes should be displayed. If no schemes match the selected filters, the system should show a clear no-results message and suggest broadening the search. This story is important because it directly addresses the project's main goal of reducing information fragmentation. It also improves user experience by helping entrepreneurs quickly discover relevant funding opportunities. In Jira, this story is included in Sprint 1 because scheme discovery is one of the first useful features after user registration and verification. The story point estimate is 5 because it requires a scheme data model, filter logic, search interface, and backend search API support.

US3.2 — Eligibility Questionnaire

This user story allows a woman entrepreneur to check whether she is eligible for a selected government scheme before applying. Many schemes have specific eligibility rules based on business category, location, income level, business stage, registration status, ownership, or document availability. Without an eligibility check, users may spend time applying for schemes they do not qualify for. This feature solves that issue by providing a short guided questionnaire. The user selects a scheme, answers the required questions, and the system evaluates the answers against the scheme rules. After completion, the system should display either Eligible or Not Eligible along with a reason. If the user is eligible, an Apply Now option should become available so she can continue the process. This story is important because it saves user time, reduces rejected applications, and improves confidence in the portal. It also helps the government agency and administrators by reducing unnecessary application load. In Jira, this story is part of Sprint 1 because it completes the onboarding-to-scheme-discovery flow. After registration, verification, and scheme search, eligibility checking is the next logical feature. The story point estimate is 5 because it requires questionnaire design, rule logic, result calculation, and integration with scheme details.

Add epic / SCRUM-6

US2.2 Eligibility questionnaire

Description

As a woman entrepreneur, I want to check eligibility so that I know whether I can apply.

Acceptance Criteria:

Given questionnaire is completed, eligibility result is shown.

Given user is eligible, Apply Now option is enabled.

Story Points: 5

4. Product Backlog Prioritization

The backlog is prioritized using the MoSCoW technique combined with business value and dependency analysis. Foundational stories (registration, verification, and scheme discovery) are ranked highest since every downstream feature depends on a verified user profile, directly reflecting the case study's core problem of fragmented scheme access.

ID	User Story (short)	MoSCoW	Business Value	Dependency	Backlog Rank
US1.1	Register with business details	Must Have	High	None	1
US1.2	Identity/document verification	Must Have	High	US1.1	2
US1.3	Edit business profile	Should Have	Medium	US1.1	6
US1.4	Password reset via OTP	Must Have	Medium	US1.1	5
US2.1	Search & filter schemes	Must Have	High	US1.2	3
US2.2	Eligibility questionnaire	Must Have	High	US2.1	4

ID	User Story (short)	MoSCoW	Business Value	Dependency	Backlog Rank
US2.3	Apply for a scheme	Must Have	High	US2.2	7
US2.4	Track application status	Should Have	High	US2.3	8
US3.1	Browse training programs	Should Have	Medium	US1.2	9
US3.2	Enroll in training	Should Have	Medium	US3.1	10
US3.3	Receive completion certificate	Could Have	Low	US3.2	13
US4.1	Connect with mentor	Should Have	Medium	US1.2	11
US4.2	Join networking groups	Could Have	Low	US1.2	14
US4.3	Mentor views mentee requests	Could Have	Low	US4.1	15
US5.1	Admin manages listings	Must Have	High	None	12
US5.2	Admin approves applications	Must Have	High	US2.3	16
US5.3	Admin usage reports	Could Have	Medium	US5.2	17
US6.1	Scheme-match notifications	Should Have	Medium	US2.1	18
US6.2	Deadline reminders	Could Have	Low	US2.3	19

4.1 Prioritization Rationale

- Registration & verification (US1.1, US1.2) are prerequisites for every other feature and are ranked #1–#2.
- Scheme search, eligibility check, and application (Epic 2) directly solve the case study's primary pain point — fragmented access to schemes — so they follow immediately after onboarding.
- Admin content management (US5.1) is elevated because schemes/training data must exist before entrepreneurs can browse or apply.
- Training, mentorship, and networking (Epics 3–4) add high value but depend on a working profile and are scheduled after the funding-discovery flow is stable.
- Certificates, group networking, and advanced reporting are lower business value in the short term and are scheduled into later sprints.
-
- **5. Sprint Backlog (Sprint 1)**

Sprint 1 is a 2-week sprint. The following 6 highest-priority stories from the top of the backlog are selected, forming a complete "onboard → discover schemes" flow that delivers immediate, demonstrable value:

- US1.1
- US1.2
- US1.3
- US1.4
- US2.1
- US2.2

5.1 Task Breakdown

Story	Task	Owner	Est. (hrs)
US1.1	Design registration UI (web + mobile-responsive)	Frontend Dev	3
US1.1	Build registration API & database schema	Backend Dev	5
US1.1	Implement duplicate-account & validation checks	Backend Dev	2
US1.2	Build document upload component (ID/business proof)	Frontend Dev	3
US1.2	Implement document format/quality validation service	Backend Dev	5
US1.2	Build admin verification review queue	Full-stack Dev	5
US1.3	Build profile edit screen & update API	Frontend/Backend Dev	3
US1.4	Implement OTP generation & SMS/email integration	Backend Dev	3
US1.4	Build password reset UI flow	Frontend Dev	2
US2.1	Design scheme catalogue data model	Backend Dev	3
US2.1	Build search & filter UI	Frontend Dev	3
US2.1	Build search/filter API with indexing	Backend Dev	5
US2.2	Design eligibility rule engine	Backend Dev	5
US2.2	Build eligibility questionnaire UI	Frontend Dev	3
QA	Write & execute test cases for registration, verification, search, eligibility	QA Engineer	8

6. Story Point Estimation (Planning Poker – Fibonacci)

The team estimated each user story using Planning Poker with the Fibonacci sequence (1, 2, 3, 5, 8, 13), where higher numbers represent greater complexity, effort, and uncertainty. Estimates reflect team consensus after discussing complexity, unknowns, and dependencies for each story.

Story	Points	Justification
US1.1	3	Standard CRUD form with validation; low complexity, well-understood pattern.
US1.2	5	Requires document upload, format validation, and an admin review workflow — moderate complexity and cross-module dependency.
US1.3	2	Simple edit form reusing registration components.
US1.4	3	OTP + SMS/email gateway integration adds minor external-dependency risk.
US2.1	5	Needs search indexing and multi-filter logic across a growing scheme catalogue.
US2.2	5	Dynamic rule engine to evaluate multiple eligibility conditions per scheme; moderate business logic complexity.
US2.3	8	Multi-step form with document upload, validation, and integration with the application-tracking workflow; highest complexity in Epic 2.
US2.4	3	Mostly a read/status-display feature layered on US2.3's data model.
US3.1	3	Straightforward listing/browse page similar to US2.1.

Story	Points	Justification
US3.2	3	Enrollment logic with seat-availability checks.
US3.3	2	Certificate generation is template-based but introduces a new PDF-generation dependency.
US4.1	5	Requires request/accept workflow and messaging thread — new sub-system.
US4.2	3	Group join/leave logic, moderate complexity.
US4.3	3	Read-focused dashboard on top of the mentor-request data model.
US5.1	5	Full CRUD admin console for schemes/training listings.
US5.2	5	Approval workflow with state transitions and notification triggers.
US5.3	8	Aggregated analytics/reporting across multiple modules; highest uncertainty and effort.
US6.1	3	Rule-based matching against user profile attributes to trigger notifications.
US6.2	2	Scheduled-job based reminder trigger; simple once the notification service (US6.1) exists.

6.1 Sprint 1 Velocity

Total story points selected for Sprint 1 (US1.1, US1.2, US1.3, US1.4, US2.1, US2.2) = 3 + 5 + 2 + 3 + 5 + 5 = 23 points, which is within the team's planned sprint capacity for a 2-week sprint with a 5-member cross-functional team.

7. Sprint Goal and Expected Deliverables

7.1 Sprint Goal

“Enable a woman entrepreneur to register on the portal, get her identity and business documents verified, manage her profile, and search government schemes with an eligibility check — establishing the foundational onboarding-to-discovery journey of the platform.”

7.2 Expected Sprint Deliverables

- A working registration module with form validation and duplicate-account prevention.
- A document upload and identity-verification workflow, including an admin review queue.
- A profile management screen allowing entrepreneurs to view and edit their details.
- A secure OTP-based password reset flow.
- A searchable, filterable government scheme catalogue.
- An interactive eligibility-check questionnaire that returns instant eligibility results.
- Test cases executed and passed for all Sprint 1 stories, with defects logged and triaged.
- A sprint demo showcasing the end-to-end registration → verification → scheme discovery flow to the Product Owner and government agency stakeholders.

7.3 Definition of Done

- Code is peer-reviewed, merged, and deployed to the staging environment.
- Acceptance criteria for each story are verified and pass QA testing.
- No critical or high-severity defects remain open.
- Documentation (API and user-facing) is updated.

- Product Owner has reviewed and accepted the sprint demo.

Rubrics for Calculation

Criteria	Excellent (5 Marks)	Good (3 Marks)	Satisfactory (2 Marks)	Needs Improvement (1 Mark)
Project Vision & Stakeholder Identification	Project vision is clear, comprehensive, and aligned with the problem statement. All relevant stakeholders and their roles are correctly identified.	Vision is clear with minor omissions. Most stakeholders are correctly identified.	Vision is partially defined. Some stakeholders are missing or incorrectly identified.	Vision is unclear or incomplete. Stakeholders are poorly identified or missing.
Epics & User Stories	Epics are well-defined and user stories are complete, follow Agile format, and fully capture functional requirements.	Epics and user stories are mostly complete with minor formatting or requirement issues.	User stories are partially complete with limited Agile structure.	User stories are incomplete, unclear, or do not follow Agile practices.
Acceptance Criteria	Acceptance criteria are specific, measurable, testable, and aligned with all user stories.	Acceptance criteria are mostly clear and testable with minor gaps.	Acceptance criteria are partially defined and lack clarity or completeness.	Acceptance criteria are missing or not aligned with user stories.
Product Backlog Prioritization & Sprint Planning	Product backlog is logically prioritized, sprint backlog is realistic, and task breakdown is complete.	Backlog prioritization and sprint planning are mostly appropriate with minor issues.	Prioritization or sprint planning is partially complete with limited justification.	Backlog prioritization and sprint planning are poorly organized or incomplete.

			on.	
Story Point Estimation, Sprint Goal & Presentation	Story point estimation is well justified, sprint goal is clear, deliverables are realistic, and presentation is professional and well organized.	Estimation and sprint goal are mostly appropriate with minor inconsistencies. Presentation is clear.	Estimation or sprint goal lacks justification. Presentation is adequate but incomplete.	Estimation is unrealistic or missing. Sprint goal, deliverables, and presentation are unclear or incomplete.

Criteria	Mark
Project Vision & Stakeholder Identification	/5
Epics & User Stories	/5
Acceptance Criteria	/5
Product Backlog Prioritization & Sprint Planning	/5
Story Point Estimation, Sprint Goal & Presentation	/5
TOTAL	/25
